- SQL

## PROFESSIONAL EXPERIENCE

**Optum |  Application Developer II  | Bothell, WA**                                    **2015 - 2017**
Analyzed business requirements and functional designs to lead Javascript code design and development.
- Coached and mentored less experienced developers to learn AngularJS 1.X and resolve UI issues, optimizing effective teamwork and collaboration with a diverse work group.
- Collaborated with product, business, UI/UX, QA, and other developers under Agile processes, delivering high quality applications, exceeding user expectations to production.
- Ensured company coding standards through code scans, code reviews, and unit tests, strengthening quality and functionality of business-critical applications.

**CashVue | Front End Web Developer Intern | Seattle, WA**                                    **2015 - 2015**
Learned the Angular 1.X framework to develop a dynamic application for cloud accounting software.
- Developed a responsive administrative user settings page to be use for version 1.0 of CashVue's MVP, which resulted in an interactive list to edit, add, and delete users.
- Utilized open sourced projects for added features, such as tables, graphs, and toolkits, optimizing the effective use of pre-built resources.

**Sno-King Junior Golf | Web Developer | Seattle WA**                                    **2014 - 2015**
Designed web development project to manage and share golf materials between the coach and players.
- Leveraged Wordpress for content and user management, further enhancing features.
- Developed a customized Wordpress theme based on UI mockups, enhancing detail and generating a seamless user experience.

## RELATED PROJECTS

**University of Washington, Information School, Seattle, WA**
**Plan My Date | INFO 320: Information Needs, Searching, and Presentation**
An individual project to create a search web application to plan date ideas, such as food and events.
- Achieved 1st in INFO 320 course competition for search applications.
- Designed a flat UI, allowing for flexible and faceted searching.
- Leveraged Google Places API and Eventful API to suggest date ideas.

**Building Search / Web Infrastructure | INFO 344: Web Tools and Development**
A back-end web development course individual project to understand information architecture.
- Designed a quick suggestive search UI and programmed a web crawler with admin interface.
- Utilized Amazon Web Services and MS Azure to store search results data.

## EDUCATION

Bachelors of Science in Informatics: Information Architecture and Human-Computer Interaction
Minor in Mathematics
University of Washington, Information School, Seattle, WA
